

MB Stone Marble, Granite, & More Spray Cleaner
Granite Cleaning Instructions

MB-5 is a combination of chemicals, slightly alkaline (pH 9), that quickly and easily cleans marble, granite countertops, ceramic, porcelain, glass, and most other hard surfaces. It also works on mirrors and bath and kitchen fixtures. It is not meant to clean heavily soiled areas or soap build-up (use MB-3 soap film remover for these areas).

See www.mbstone.com for technical assistance.

Directions:

Hold sprayer 6 to 8 inches from surface and spray a light mist over area to be cleaned. Let the product sit for approximately 30 seconds then scrub with a sponge or light duty pad. Buff the surface with a paper towel or clean white cloth. When towel or cloth becomes wet, discard and use a new one.
